

[gridView] drilldown 그리드에서 동일그룹 일괄 선택

- 본 샘플은 웹스퀘어5 SP4 버전에 최적화되어 있습니다

요건

아래 그림과 같이 부모row 선택시 하위 row들을 일괄로 선택/선택해제 처리하고자 하는 경우

DrillDown				
		Menu.	Depth	FilePath.
1	<input type="checkbox"/>	[-] Education	2	
2	<input type="checkbox"/>	• Basic	3	/websquare5/edu/basic.xml
3	<input checked="" type="checkbox"/>	[-] DataCollection	2	
4	<input checked="" type="checkbox"/>	• DataMap Binding	3	/websquare5/components/DataCollection/DataMapBin...
5	<input checked="" type="checkbox"/>	• DataList Binding	3	/websquare5/components/DataCollection/DataListBin...
6	<input checked="" type="checkbox"/>	• LinkedDataList Bin...	3	/websquare5/components/DataCollection/LinkedData...
7	<input checked="" type="checkbox"/>	• Master Detail Bindi...	3	/websquare5/components/DataCollection/masterDetai...
8	<input type="checkbox"/>	[+] TableLayout	2	
9	<input type="checkbox"/>	[+] GridView	2	

해결책

- 그리드뷰 onviewchange 이벤트를 활용한다
 - onclick을 사용할 경우 체크박스 바깥 영역을 클릭 할 경우에도 이벤트가 발생한다
- onviewchange이벤트 핸들러는 보여지는 화면 기준으로 rowindex를 패러미터로 전달받기 때문에 실제 데이터리스트상 rowindex를 참조하기 위해선 getRealRowIndex 를 이용한다
- onviewchange 이벤트 처리소스 참고

```
scwin.gridView1_onviewchange = function(info) {  
    if(info.colIndex != 0){  
        return;  
    }  
    var row = dataList_menu.getRealRowIndex(info.rowIndex);  
    var cur_val = info.newValue;  
    console.log(cur_val);  
    var cur_depth = dataList_menu.getCellData(row, "LEVEL_CNT");  
    //var row_cnt = dataList_menu.getRowCount(); //WPF-1631  
    var row_cnt = dataList_menu.getTotalRow();  
    for(var ix=1; Number(dataList_menu.getCellData(row+ix, "LEVEL_CNT")) > cur_depth; ix++){  
        dataList_menu.setCellData(row+ix, 0, cur_val);  
        if(row+ix > row_cnt-1){  
            break;  
        }  
    }  
}  
};
```
